Bioenergy Sustainability is precondition to growth

Hannes Tuohiniitty, Bioenergia
ry

REDII sustainability criteria - common framework

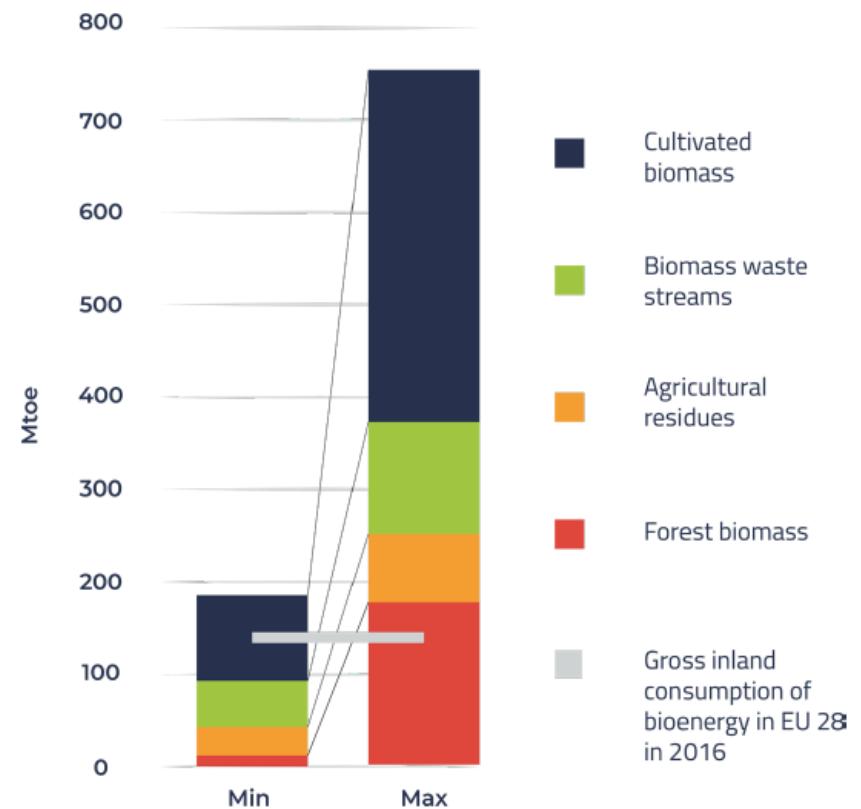

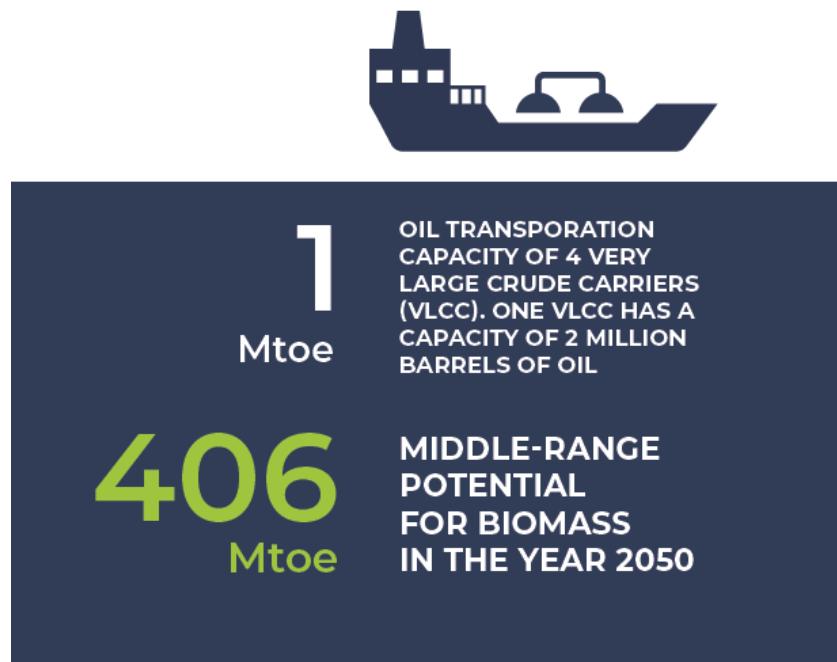

- First of a kind framework for operators and renewable fuel chain, affects globally
- No-go –areas: nature conservation, carbon integrity
- Criteria to maintain or enhance soil quality and biodiversity, LULUCF
- Sets (in practice) binding criteria for bioenergy feedstock and production
- Can be build on general forestry sustainability schemes & structures → common procedures regardless of end use

Negative emissions; needed more than ever – bioenergy has a role

Hannes Tuohiniitty, Bioenergia
ry

More natural sinks needed

Figure 87: LULUCF emissions across the scenarios

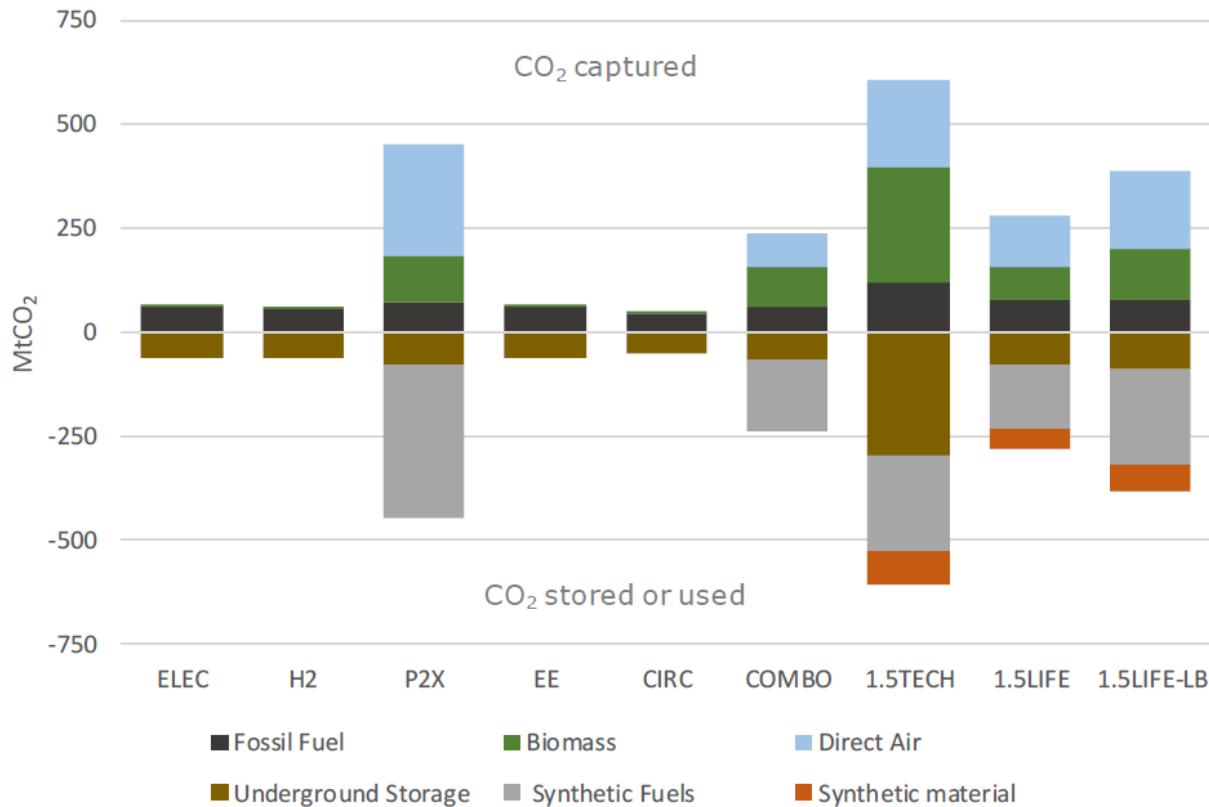

Increase of natural sinks from baseline

90 – 200 MtCO₂

Source: European Commission, 2018

Technological solutions

Figure 89: CO₂ capture and storage or reuse (2050)

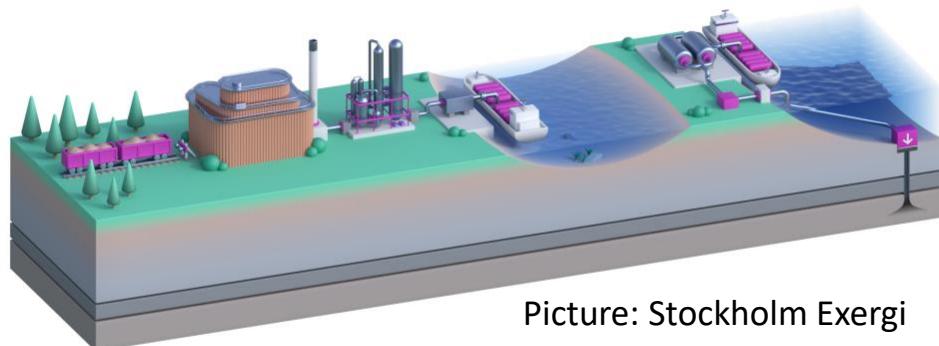

270 – 600 MtCO₂
more compared to
baseline

Source: European Commission, 2018

BECCUS development possible

- WEO2019 foresees 1 Mtn/a BECCUS in 2030 and 94 Mtn/a in 2040 of CO₂
 - But already now more than 1 Mtn/a of BECCS and 0,5 Mtn BECCU operating (mainly in US)
 - Few BECCUS project in Europe starting; Oslo, Stockholm, York
- Several CCS-infra projects on PCI-list building the operational infrastructure, with several different storages.
- If Europe wants negative emissions on major scale, we need policy framework that supports it sustainably
- Unabated fossil -exit is the primary goal, CCS infra CAPEX should be covered by fossil fuels

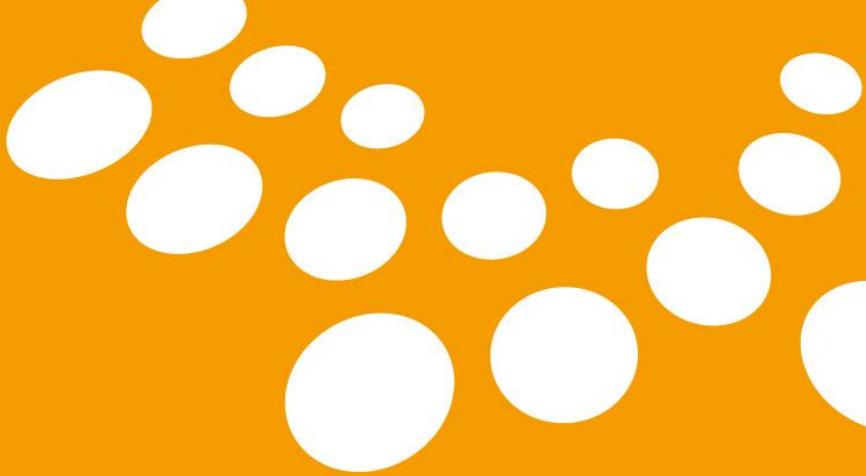

Picture: Stockholm Exergi

The main messages

- Europe and World needs bioenergy, and more of it is to come
- Sustainable biomass is here to double – triple bioenergy use
- Is Europe serious about our carbon neutrality targets? If yes, emphasis needed on NET's too.

Let's continue the positive change!
